

# SAFETY FIRST OTHERS NEXT

## **Need for GUARD ALERT:**

Nowadays In every industries, apartments, houses, hospitals and shopping complexes have security guards to protect their assets from being stolen. Even though, in every day newspapers we are reading about the theft and crime. This can be due to the carelessness of the security guards. Some of the guards even sleeping during their guard time.

So we have a equipment to watch a security guard, whether he is properly working in his duty time or not.

## **GUARD ALERT:**

The Guard alert is a electronic equipment which gives a alarm for every set time interval in minutes. On hearing this the security guard has to press the Enter key to state his presence in that place. If the acknowledgement is not received within the grace time it will be marked as Lapse events i.e., the security is not responded within time. This event is also stored into memory with date and time so that it can be viewed by the Owner later. Even it has the facility to alert the owner (hooter) on the 2 or 3 continuous lapse events on that moment itself.

## **FEATURES**

- 1 Easy install and operation modes.
- 2 Interactive menus.
- 3 Fool proof .
- 4 Settings can be changed at any time .
- 5 Auto and visual alert indication.
- 6 Battery backup.
- 7 999 records storage.
- 8 hooter , speech dialer can be connected.
- 9 Random alarm interval.
10. Useful auto mode.
11. Data retention for upto 10 years.

## **Technical Specifications:**

1. Supply Voltage : 100 - 250VAC
2. Wall Mounting type
3. Dimensions 142 X 175 X 85 mm
